SUMMARY

Computer Information Science student graduating December 2026 with software engineering internships, Python automation experience, and a peer-reviewed publication on generative AI. Builds full-stack applications and AI-assisted quality engineering workflows, supported by mathematics and statistics tutoring, data analysis, and technical competition awards.

EDUCATION

Washburn University, Topeka, KS — Expected Dec 2026
Bachelor of Science in Computer Information Science
Minors: Mathematics and Statistics
Cybersecurity Certificate, Washburn University — Expected Dec 2026
Additional Training: Machine Learning and Python, Deerwalk Training Center (2023);
CS50x: Introduction to Computer Science, Harvard University (Online, 2022)

TECHNICAL SKILLS

Languages: Python, SQL, Java, TypeScript, JavaScript, C, Solidity, HTML/CSS
Web Development: React, Next.js, FastAPI, Flask, Node.js, Tailwind CSS
Databases: MySQL, MongoDB, Supabase, Redis; relational database design
AI and APIs: Generative AI, agentic AI workflows, OpenAI API, Anthropic Claude API, Jira REST API
Engineering: Data structures, algorithms, debugging, automated testing, Jest, Hardhat, continuous integration
Quantitative and Research: Statistics, calculus, discrete mathematics, data analysis, surveys, interviews

TECHNICAL EXPERIENCE

Quality Engineering and AI Research Intern — May 2026 - Aug 2026
FireMon — Kansas City, KS (Remote)

- Developed a Python integration connecting the Jira REST API and Anthropic Claude API to automate quality assurance (QA) ticket analysis and testing workflows.
- Lead an internal research and development pilot exploring agentic AI for QA and network security workflows; demonstrate AI-assisted engineering practices to support team adoption.

Software Developer and AI Research Intern — Feb 2024 - Present
Nyalia's Software Solutions (NSS) — Topeka, KS (Hybrid)

- Build full-stack web applications and integrate AI features across frontend, backend, and model integration layers; collaborate with cross-functional teams to test and improve AI workflows.
- Translate client requirements into playable games, developing software from initial specifications through implementation.

RESEARCH AND PUBLICATIONS

Generative AI in Higher Education | Washburn University — 2025

- Co-authored a peer-reviewed mixed-methods study of generative AI use, ethics, and academic impact, drawing on surveys of **114 students** and interviews with **18 professors**.
- Investigated student and faculty perspectives on AI adoption and academic integrity; presented findings at the IACIS Annual Conference in Clearwater, Florida (October 2025).

Publication: Sah, R., Hagemaster, C., Adhikari, A., Lee, A., & Sun, N. (2025). Generative AI in higher education: student and faculty perspectives on use, ethics, and impact. *Issues in Information Systems, 26*(2), 373-386. doi:10.48009/2_iis_129

SELECTED PROJECTS

ListifyAI | AI-Powered Campus Marketplace

- Built a full-stack marketplace using React, TypeScript, FastAPI, MongoDB, and OpenAI APIs for college students to buy and sell items.
- Implemented AI-assisted student ID verification, image-based listing generation, semantic search, real-time chat, and cryptocurrency payments.

BlockBallot | Blockchain-Based Voting Platform

- Developed Solidity smart contracts on the Arbitrum Sepolia testnet for immutable vote recording, decentralized verification, and real-time auditability.
- Built the application with Next.js, TypeScript, Supabase, and Ethers.js; implemented locking to prevent duplicate voting and tested functionality with Hardhat and Jest.

Champions League | Relational Database Application

- Designed an entity-relationship model and MySQL database for teams, players, matches, and tournaments; implemented SQL joins, stored procedures, and CRUD workflows through Flask and Jinja2.

Dragon Groove | 3D Action-Adventure Game

- Developed a game with Next.js, TypeScript, Three.js, and WebGL, implementing physics-based combat, animated characters, interactive environments, and camera systems.
- Built modular components and optimized asset pipelines, supported by automated testing and continuous integration workflows.

TEACHING EXPERIENCE

Washburn University, Topeka, KS
Computer Information Science Tutor Dec 2024 - Present

- Tutor Python, Java, C, data structures, algorithms, operating systems, networking, cybersecurity, and databases; guide software engineering and AI/ML projects through design, implementation, and debugging.

Mathematics and Statistics Tutor Sep 2023 - Aug 2026

- Teach statistics, calculus, advanced algebra, logic, functions, vectors, and trigonometry, helping students develop structured approaches to mathematical problem solving.

ADDITIONAL EXPERIENCE

Management Intern May 2025 - May 2026
Walgreens Topeka, KS

- Analyzed SAP data and store performance metrics to support planning for **20+ associates**; improved scheduling efficiency and reduced labor costs by **10%**.
- Reduced inventory shrink by **40%** through targeted management interventions.

New Church Development Summer Intern May 2024 - Aug 2024
Great Plains Annual Conference, UMC Topeka, KS

- Analyzed development data in BrickRiver and performed financial modeling and budget forecasting to support resource allocation; developed a website with content workflows and donation integration.

AWARDS AND LEADERSHIP

Best in Show, CCSC Central Plains Student Hackathon Apr 2026
Top 4 of 21 teams, CCSC Central Plains Programming Competition Apr 2025
Washburn Representative, Kansas MAA Mathematics Competition Mar 2024
President, Club Mathematica Aug 2025 - Aug 2026
Organize mathematics workshops, faculty talks, and conference participation.
President, ByteBods Computer Club Aug 2023 - Aug 2025
Led hackathons, coding competitions, and speaker events.
